HackaKhan 2024

June 8th, 2024

Khan Lab School in Mountain View, CA

What is HackaKhan?

The buzz around Chat-GPT and Khanmigo inspired us to create an event for students to innovate and explore computer science. We wanted our attendees to draw upon their diverse experiences to redefine education and the use of technology in classrooms.

That's how we came up with HackaKhan: a 12-hour event at Khan Lab School, open to all middle and high school students in the Bay Area. Last year, we hosted 75 attendees from 29 different schools. This year, we aim for 100+ students with at least 50% female participation!

Our Story

The HackaKhan team consists of three high schoolers who are passionate about using technology for social good and want to share our unique opportunities with the wider community. We each fell in love with computer science through a mix of attending hackathons and working on independent projects.

HackaKhan is associated with Khan Lab School (KLS), a small, mixed-age K-12 school in Mountain View, California. KLS was established by educator and Khan Academy founder Salman Khan (www.khanacademy.org). In alignment with our school's mission and philosophy, the theme of HackaKhan is education technology.
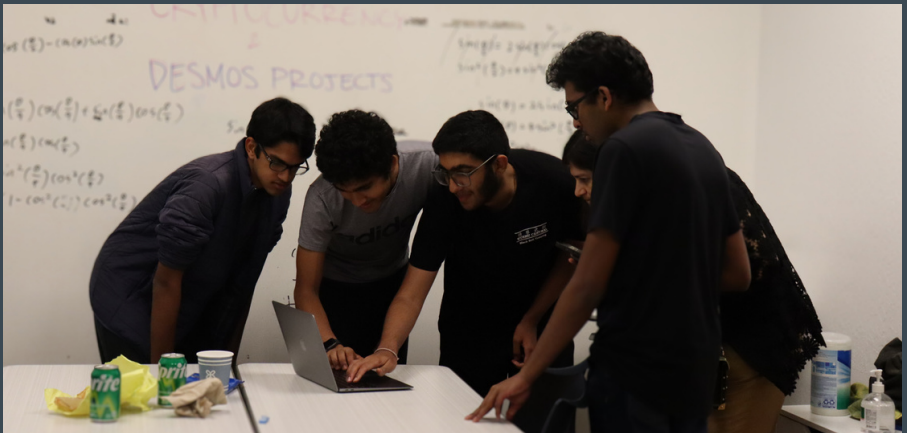

Why be a sponsor?

As a sponsor, you and your organization are providing our participants with a platform to explore the endless possibilities of technology. Especially because many of our attendees are new to hacking, you play a key role in shaping their pursuit of computer science with your products or services.

We'd appreciate your support, whether in the form of monetary or in-kind donations—anything from swag to a prize! We are flexible and open to negotiating certain terms.

Please reach out to us at contact@hackakhan.org!
